

Take action NOW to end the spread of Nuclear Weapons

On July 7, 2017, 122 member states of the United Nations agreed to an historic **Treaty on the Prohibition of Nuclear Weapons**, a treaty which will become international law after 50 nations have signed and ratified it. At last the world has the first-ever treaty to ban nuclear weapons.

Unfortunately, the United States is one of the nations that strongly opposes such a ban. We believe this is contrary to the wishes of the majority of Americans and that it is imperative that the U.S. join with other nuclear nations in banning these horrendous weapons which, if ever used, could destroy civilization and put at risk the future of humankind and all life on earth.

**Prepared by WAMM Campaign to Ban Nuclear Weapons
612-827-5364 • WomenAgainstMilitaryMadness.org**

What You Can Do Today to Help

1 Sign and send the WAMM postcards to MN Senators Klobuchar and Smith asking them to speak out publicly in support of the **Treaty on the Prohibition of Nuclear Weapons**. Ask your friends to sign and send postcards.

2 Join more than 9,500 other Minnesotans in signing the **WAMM Petition to Ban Nuclear Weapons**, which is addressed to the 10 members of the MN Congressional delegation. Get 20 friends to sign the petition and send the petitions to WAMM.

3 If you are not from Minnesota, start a Campaign to Ban Nuclear Weapons in your state!

For postcards and/or a copy of the petition, call Women Against Military Madness at 612-827-5364 or go to WomanAgainstMilitaryMadness.org. The 10-page Treaty on the Prohibition of Nuclear Weapons and a Q&A relative to the treaty can be found on the WAMM website.

The Case for the Abolition of Nuclear Weapons

Humanitarian

There is no effective humanitarian response, or meaningful health response, to the use of nuclear weapons. Nuclear weapons are unique in their destructive power; in the unspeakable human suffering they cause, and in the threat they pose to the environment, to future generations, and indeed to the survival of humanity.

Environmental

Nuclear weapons are the only devices ever created that have the capacity to destroy all complex life forms on earth. According to studies by Physicians for Social Responsibility, the use of even a fraction of current arsenals would cause catastrophic climate disruption, a devastating agricultural collapse, and a global famine that could kill two billion people. And as climate change progresses, the danger of nuclear war will increase dramatically as nations experience limited food and water resources and try to deal with forced migrations that will dwarf the current refugee crisis.

Security

Nuclear weapons do not make us more safe. Far from keeping the peace, they breed fear and mistrust among nations, and are useless in addressing any of today's real security threats, such as terrorism, climate change, extreme poverty, overpopulation and disease. There are many documented instances of the near-use of nuclear weapons, and unless we eliminate them, they will almost certainly be used again, either intentionally or by accident, and the consequences will be catastrophic.

Economics

Nuclear weapons programs divert public funds from health care, education, repair of the infrastructure, disaster relief and other vital services. The nine nuclear armed nations spend many tens of billions of dollars each year maintaining and modernizing their nuclear arsenals.
